

Swisscom Energy Solutions will take part in the E-World energy and water 2017 to develop new business opportunities around its innovative product tiko

Swisscom Energy Solutions, the Swiss-based company which owns and develops the tiko platform, will attend the E-World energy and water from the 07<sup>th</sup> to the 09<sup>th</sup> of February 2017, in Essen, Germany.

The tiko platform is a flexible and modular technology which already connects thousands of electrical customers and prosumers into a single network, in order to enable a wide range of utility-scale and behind-the-meter smart energy management solutions. This industrial grade smart grid has been delivering ancillary services to the grid and to its users since 2012. The smart grid connects all types of electrical heating systems, photovoltaic equipment, batteries, and charging stations, and its per second reaction-time enables a long list of services.

Utilities and suppliers all over Europe are working every day with this unique technology to align customer needs with their own, while creating additional value for all involved stakeholders, e.g. through frequency response and DR/DER.

Powered by a unique algorithm, the product range includes products like tiko power, an energy management system helping customers take control over their heating systems and save energy while connecting them to the network, tiko sun, a PV-optimization system, and tiko storage, designed for battery owners who can then be connected to the network, enabling distributors like sonnen to promise a zero-euro electricity bill. tiko cooling will soon be launched to optimize A/C systems, while tiko mobility will complete the range, proposing smart energy management systems to prosumers.

During the E-World energy and water, Swisscom Energy Solutions will welcome their guests at booth 7-530 in Hall 7, strategically placed in the Smart Energy area.

Special one-to-one meetings will also be organized with strategic players to develop further existing partnerships and foster new exciting business opportunities.

All attendees will of course be welcome at booth number 7-530 in Hall 7.

Olten, Switzerland, 18<sup>th</sup> January 2017
